- Extensive experience in water and energy projects (onshore and offshore)
- Specialist in Project Management methodology and Project Control for EPC contracts
- Knowledgeable in FEED and engineering development issues
- Languages spoken are English, French, and German

#### Summary:

Emmanuelle has worked in project and contract management for large international contractors on various EPC projects throughout Asia and Europe from 1992 to 2009.

Starting her career as a project engineer for contractors in Singapore and Malaysia, she soon became more and more involved in all aspects of project management including project control, change management, and risk management.

As a contractor, she has worked in many international and multicultural joint ventures. In 2009 she joined a French Public Institution for a large infrastructure PPP project, in charge of preparing the bid documentation and organising the competitive dialogue.

Further training in Arbitration between 1999 and 2004 helped her to develop strong analysis skills. Since 2013, acting as a consultant, she further specialised in contract and risk management, coaching both public and private sector organisations on Contract and Change management methodology.

This expert has recently been instructed by:

- Shearman & Sterling LLP
- Voies Navigables de France

*"I have known Emmanuelle Becker Paul for almost 10 years, while we worked together on a large difficult onshore energy project. Since she's been working as a consultant, I have recommended her, and still do, for expert appointments for projects within the group and always got positive feedback. She is a reliable expert on large industrial and infrastructure projects, especially when complex engineering issues are involved. I am available upon request to answer any query regarding this testimonial."*
